Keynotes

Some current development trends in metal-forming technology 1
R. Kopp

Mechanical, thermal and physical coupling methods in FE analysis of metal forming processes 11
J.-L. Chenot, Y. Chastel

Sheet metal forming simulation in industry 19
A. Makinouchi

Microstructure modelling for property prediction and control 27
P.D. Hodgson

Finite deformation plasticity with strain induced anisotropy and shear banding 35
R.B. Pęcherski

A review of the numerical analysis of superplastic forming 45
R.D. Wood, J. Bonet

Rolling

Numerical and experimental simulation of pass rolling 55
P. Macura, J. Petruska

Deformation during rolling in modified elongating grooves 61
E. Łabuda

Manufacturing systems for the production of seamless-rolled rings 67
Z.J. Szabo, E. Dittrich

Asymmetry of the roll gap as a factor improving work of the hydraulic gauge control in the plate rolling mill 73
H. Dyja, J. Markowski, D. Stoiński

The influence of some rolling parameters on the residual stresses after rolling 81
W. Razny, F.D. Fischer, G. Finstermann, W. Schwenzfeier, K. Zeman

The modelling of the mechanics of deformation in flat rolling 87
W.Y.D. Yuen, A. Dixon, D.N. Nguyen

A study of pore closure and welding in hot rolling process 95
A. Wang, P.F. Thomson, P.D. Hodgson

Finite element investigation of curvature in the roll platen forming process 103
Q. Xu, P. Hartley, I. Pillinger

A steady state thermo-elastoviscoplastic finite element model of rolling with coupled thermo-elastic roll deformation 109
A. Hacquin, P. Montmitonnet, J.-P. Guillerault

Elsevier Science S.A.

Forging and extrusion

Material physical response in the extrusion process 117
W.Z. Misiolek

Application of a decision making method in the forging condition optimisation for manufacturing automotive components 125
A. Forcellese, F. Gabrielli, R. Ruffini

Safety maps in bimetallic extrusions 133
J.L. Alcaraz, J. Gil-Sevillano

Control of material flow in a combined backward can -forward rod extrusion 141
K. Kuzman, E. Pfeifer, N. Bay, J. Hunding

Local flange buckling and its relation to elastic springback in forming of aluminium extrusions 149
T. Welo, F. Paulsen

Drawing

Some problems of multi-stage fine wire drawing of high-alloy steels and special alloys 155
A. Skołyszewski, J. Łuksza, M. Paćko

State of strain in the tube sinking process 161
L. Sadok, J. Kusiak, M. Paćko, M. Rumiński

Drawing of square twisted wire 167
F. Knap

The effects of die angle on texture and annealing response of ETP copper wire 171
F.F. Kraft, U. Chakkingal, G. Baker, R.N. Wright

Influence of die semi-angle on mechanical properties of single and multiple pass drawn copper 179
A.L.R. de Castro, H.B. Campos, P.R. Cetlin

Sheet forming and roll forming

Square cup deep drawing and 2D-draw bending analysis of Hadfield steel 183
E. Bayraktar, S. Altintas

Virtual manufacturing for sheet metal processing (Development of scheduling simulator for small scale job shop) 191
J. Endo, S. Ohba, T. Anzai

Analytical and experimental analysis of deep drawing process for bimetal elements 197
S. Kapiński

Analysis of punch-stretching in vibratory regime 201
D. Banabic

Circle grid analysis applied to the production problems of the car body panel 205
Z. Buchar

Computer aided design of roll-forming of channel sections 209
M. Brunet, B. Lay, P. Pol

Numerical simulation of roll-forming process by B-spline finite strip method 215
C. Liu, Y. Zhou, W. Lu

Longitudinal and shear strain development in cold roll forming 219
S.M. Panton, J.L. Duncan, S.D. Zhu

Computer aided engineering of the sheet bending process 225
A. Forcellese, L. Fratini, F. Gabrielli, F. Micari

Change in shape of a cold formed and annealed stainless steel sheet and joining with use of this change 233
Y. Kasuga

Plastic anisotropy in FEM analysis using degenerated solid element 239
M. Kawka, A. Makinouchi

Industrial applications of sheet stamping simulation using new finite element models 243
J. Rojek, J. Jovicevic, E. Oñate

Development of real-time process control system for precision and flexible V-bending with an on-line database 249
M. Yang, K.-I. Manabe, H. Nishimura

Simulation of sheet cutting by the large time increment method 255
A. Abdali, K. Benkrid, P. Bussy

Workability, damage and defects

Micromechanics of spall and damage in tantalum 261
A.K. Zurek, W.R. Thissell, J.N. Johnson, D.L. Tonks, R. Hixson

The determination of the cold forgeability for specimens with axial notches of heat resisting 269
and corrosion resisting chromium nickel steels
L. Janicek, B. Maros

The effect of the roll-gap shape factor on internal defects in rolling 275
S. Turczyn

Comparison of formability of steel strips, which are used for deep drawing of stampings 283
R. Cada

Prediction of forming limit in deep drawing of Fe/Al laminated composite sheets using ductile fracture criterion 291
H. Takuda, K. Mori, H. Fujimoto, N. Hatta

An orthotropic ductile damage model for visco-plastic materials 297
C. Staub, J.C. Boyer

Microstructural model of intergranural fracture during tensile tests 305
J. Lu, J.A. Szpunar

Material characterization for the prediction of ductile fracture occurrence: an inverse approach 311
L. Fratini, A. Lombardo, F. Micari

The influence of hot deformation on the microstructure of Ni-Al and Ni-Al-Fe alloys with small Ti_2B addition 317
T. Czeppe, S. Szczepanik

Post-processing of finite element results and prediction of the localized necking in sheet metal forming 325
N. Boudeau, J.C. Gelin

Friction and surface phenomena

Measurements of friction during hot rolling of aluminum strips 331
B. Hum, H.W. Colquhoun, J.G. Lenard

Some observations on contact stress measurement by pin load cell in bulk metal forming 339
M. Plancak, A.N. Bramley, F.H. Osman

Contact pressure distribution in upsetting of compound metals 343
A. Kocańda, W. Presz, G. Adamczyk, P. Czyżewski, W. Mazurek

Friction modelling and experimental observations in hot ring compression tests 349
N.T. Rudkins, P. Hartley, I. Pillinger, D. Petty

Development of deterministic-stochastic surface structures to improve the tribological conditions 355
of sheet forming processes
K. Steinhoff, W. Rasp, O. Pawelski

Properties of metal sheets with 3-D designed surface microgeometry prepared by special rolls 363
H. Ike

Development of a FEM-model for the simulation of the transfer of surface structure in cold-rolling processes 369
R. Bunten, K. Steinhoff, W. Rasp, R. Kopp, O. Pawelski

Analysis of herring-bone mechanism in sheet rolling 377
K. Komori

Artificial intelligence

Prediction of rolling force in cold rolling by using physical models and neural computing 381
J. Larkiola, P. Myllykoski, J. Nylander, A.S. Korhonen

Neural network for identification of roll eccentricity in rolling mills 387
K. Aistleitner, L.G. Mattersdorfer, W. Haas, A. Kugi

The improved control for an aluminium hot reversing mill using the combination of adaptive process models and an expert system 393
I. Postlethwaite, P.A. Atack, I.S. Robinson

Development of prediction model for mechanical properties of batch annealed thin steel strip by using artificial neural network modelling 399
P. Myllykoski, J. Larkiola, J. Nylander

Application of synergetic artificial intelligence to the scheduling in the finishing train of hot strip mills 405
S. Xiaoguang, H. Ning, S. Huyang, W. Wei, S. Zhenbang, W. Guodong

Numerical modelling

Parallel finite element calculation of plastic deformations on Exemplar SPP1000 and on networked workstations 409
M. Bubak, R. Chrobak, J. Kitowski, J. Mościński, M. Pietrzyk

An examination of long-rod penetration in micro-scale using particles 415
W. Dzwinel, W. Alda, J. Kitowski, J. Mościński, D.A. Yuen

Application of process modelling - an industrial view 421
D.M. Petty

A three-dimensional study of flow in the fullering process using an elastic-plastic finite-element simulation 427
F. Fereshteh-Saniee, I. Pillinger, P. Hartley, F.R. Hall

Variational methods in the mechanics of metal forming by pressure 435
V.I. Tarnovskij

Modelling of the thermomechanical coupling during hot forming of viscoplastic materials 441
J.C. Gelin, B.V. Nguegang

An inverse analysis using a finite element model for identifcation of rheological parameters 447
A. Gavrus, E. Massoni, J.-L. Chenot

Inverse analysis applied to the evaluation of material parameters in the history dependent flow stress equation in hot forming of metals 455
J. Kusiak, R. Kawalla, M. Pietrzyk, H. Pircher

Determination of hammering sequence in incremental sheet metal forming using a genetic algorithm 463
K. Mori, M. Yamamoto, K. Osakada

A study on the influence of friction evolution on thickness changes in sheet metal forming 469
W. Sosnowski, M. Kleiber

Application of a FEM code to the evaluation of the friction law of a tungsten part at high temperatures 475
C. Thiebaut, J.-M. Morey

On modelling of the contact conditions in compound die using the hermitian finite elements 481
M. Forejt, J. Vrbka

Sensitivity analysis of metal forming processes involving frictional contact in steady state 485
H.J. Antunez, M. Kleiber

Application of the R-functions method to visioplastic analysis in metal forming 493
V.D. Pokras, M.A. Rvachev

Process simulation and control

Finite element three-dimensional modelling of the solidification of a metal forming charge 501
M. Głowacki

A fully 3D finite element simulation of cold pilgering 505
S. Mulot, A. Hacquin, P. Montmitonnet, J.-L. Aubin

Thermal-mechanical model of the tube elongation process in Diescher's mill 513
Z. Malinowski, J. Kazanecki, S. Urbanski

Spatial modelling of swaging process using finite element method applied to axially-symmetrical problems 517
A. Piela, F. Grosman

Simplified numerical simulation of forming a car wheel disk using the *SIMEX* explicit FEM code, and comparisons with press-shop results 523
G. Ferran, C.R.M. Barros, E. di Pasquale, E. Yamashita

On optimal position control of mechanisms in rolling processes 529
W.Hejmo, R.Kozioł

Adaptation of hot mill process models 535
P.A. Atack, I.S. Robinson

Development of optimum process design system by numerical simulation 543
T. Ohata, Y. Nakamura, T. Katayama, E. Nakamachi, K. Nakano

Analysis of plane-strain rotational compression of rod by FEM 549
Z. Pater

Cold forming processes: some examples of predictions and design optimization using numerical simulations 555
G. Brethenoux, E. Bourgain, G. Pierson, M. Jallon, P. Secordel

Microstructure and properties

Microstructure development during the deformation of aluminium-magnesium alloys 563
B.A. Parker, J.H. Lim

Experimental and mathematical simulation of microstructural evolution during hot rolling of Al and Cu material 567
W. Lehnert, N.D. Cuong

Hot deformation behavior and grain refinement of intermetallic compound Ni_3Al 575
I. Schindler, J. Machacek, J. Kliber, M. Greger, M. Kursa

Use of the computer simulation to predict mechanical properties of C-Mn steel, after thermomechanical processing 581
J. Majta, R. Kuziak, M. Pietrzyk, H. Krzton

Modelling of plastic flow, heat transfer and microstructural evolution during rolling of eutectoid steel rods 589
R. Kuziak, M. Glowacki, M. Pietrzyk

Recrystallization/precipitation behaviour in microalloyed steels 597
J. Kliber, I. Schindler

Validation of thermomechanical and microstructural models for niobium steels in hot rolling-drawing 603
Z. Kedzierski, M. Pańko, A. Skołyszewski, A. Zielińska-Lipiec, H. Kusiak

Physical simulation of hot rolling in the ferrite range of steels 609
H. Grossheim, K. Schotten, W. Bleck

The effect of through-thickness strain distribution on the static recrystallization of hot rolled austenitic stainless steel strip 615
X.J. Zhang, P.D. Hodgson, P.F. Thomson

Constitutive law and material models

Development of constitutive equations of copper-silicon alloys 621
Z.J. Gronostajski

Modelling of welding. A comparison of a thermo-mechano-metallurgical constitutive model with a thermo-viscoplastic material model 629
J. Ronda, Y. Estrin, G.J. Oliver

The influence of warm plastic deformation on the structure and on the applicable properties of high speed steel 637
L. Berkowski

New experiments for determining yield loci of sheet metal 643
W. Müller, K. Pöhlandt

Intrinsic criterion of plastic instability 649
H. Moritoki, E. Okuyama

Unconventional processes

Wire drawing with ultrasonically oscillating dies 657
K. Siegert, A. Möck

The effect of ultrasound on tube drawing 661
J. Petruzelka, J. Sarmanova, A. Sarman

Hydroforming - a method to manufacture light-weight parts 669
F. Dohmann, Ch. Hartl

Experimental and numerical dynamic modelling of ironing process 677
L. Baillet, M. Brunet, Y. Berthier

Numerical modelling of the mechanical state of deformable gaskets in diamond anvil cell 685
S.B. Polotnyak, A.V. Idesman

Superplasticity and mushy state

Determination of optimum working conditions in mushy-state upsetting of magnet using distinct element simulation 691
M. Otsu, K. Mori, K. Osakada

New aspects of the plastometric tests for middle and high carbon steels in the superplastic conditions 697
S. Rusz, W. Łapkowski, J. Sinczak, J. Boruta

Composites

The formability of the Al-5%SiC composite obtained using P/M method 703
S. Szczepanik, W. Lehnert

Numerical prediction of the development of particle stress in the forging of aluminium metal matrix composites 711
S.M. Roberts, J. Kusiak, P.J. Withers, S.J. Barnes, P.B. Prangnell

Production of composites on the base of AlCu4 alloy chips 719
J.Z. Gronostajski, H. Marciniak, A. Matuszak

Fast upsetting of circular cylinders of aluminium metal matrix composites: experimental results and numerical analysis 723
A.M.S. Hamouda, S. Sulaiman, M.S.J. Hashmi

The influence of the hot deformation and heat treatment on the properties of P/M Al-Cu composites 729
S. Szczepanik, T. Sleboda
